I should invent something

They could find out if the graphic design of money effects the amount spent as compared with saved, then at some countries, but not the united

states, redo the graphics on money to favor saving, .5% of $11/24 hours, 365/yr 240 million currency users is about 963300 million dollars, 963 billion dollars, so 48-96 billion $ of

additional voluntary saving a year, globally this might be near 480-960 billion a year in annual voluntary savings
